ABSTRACT

This paper deeply discusses the internal logic and path of green finance in promoting the construction of rural spiritual civilization in Hubei Province. Firstly, the article analyzes the internal relationship between green finance and rural spiritual civilization construction, and points out that green finance provides important support for rural spiritual civilization construction by promoting the green transformation of rural economy, improving rural ecological environment, and enhancing rural residents' environmental awareness. Then, the article constructs the logical framework of green finance to promote the construction of rural spiritual civilization, and expounds its operation mechanism in detail. On this basis, the article further explores the specific path of green finance to promote the construction of rural spiritual civilization in Hubei Province, including policy guidance, market drive, social participation and other strategies and measures.

KEYWORDS

Green Finance; Construction of rural spiritual civilization; Intrinsic logic

1 Introduction

Green finance is an important tool to cope with environmental challenges and promote the green transformation of the economy. It is gradually receiving widespread attention and promotion around the world. It not only pays attention to economic benefits, but also emphasizes the harmonious unity of environmental benefits and social benefits, providing strong support for achieving sustainable development goals. As an important part of rural revitalization strategy, rural spiritual civilization construction has far-reaching significance for improving the quality of life of rural residents and promoting the overall progress of rural society. Green finance and rural spiritual civilization construction seem to be two independent fields, but in fact there are internal connections and interactions.

The development of green finance can provide financial support and project guidance for rural areas, promote the green transformation of rural economy, and thus create more favorable material conditions for the construction of rural spiritual civilization. On the other hand, the improvement of rural spiritual civilization construction can also enhance rural residents' environmental awareness and green life concept, and lay a more solid foundation for the promotion of green finance in rural areas.

2 Analysis of the Relationship Between Green Finance and the Construction of Rural Spiritual Civilization

Green finance emphasizes the full consideration of environmental factors in financial activities, and through the optimal allocation of financial resources, it guides the flow of funds to green, low-carbon, and environmentally friendly fields to promote the transformation of the economy to green. Green finance not only focuses on traditional financial returns, but also pays attention to long-term environmental benefits and sustainable development potential. It is an important means to achieve green development and cope with climate change. The construction of rural spiritual civilization aims at promoting the harmonious, stable and all-round development of rural society by carrying forward the socialist core values, improving the moral level and cultural quality of rural residents. It emphasizes that on the basis of material civilization construction, it pays attention to the development and promotion of spiritual level, and realizes the coordinated development of rural economy, politics, culture, society and ecological civilization.

There is a close and profound relationship between green finance and rural spiritual civilization construction. This relationship is not only reflected in the fit of concepts, but also in the mutual promotion in practice. As an important means to achieve green economic transformation and sustainable development, the core of green finance lies in guiding funds to flow to environmentally friendly, low-carbon, and sustainable fields through the optimal allocation of financial resources, thereby promoting the greening and ecological economy. The construction of rural spiritual civilization is the soul of rural revitalization strategy, aiming at improving the ideological and moral quality, scientific and cultural literacy and civilization of rural residents, and building a harmonious, beautiful and livable rural environment. Both of them are highly consistent in goals, and they are committed to promoting the all-round development and sustainable development of rural areas.

Logically, green finance provides strong economic support for the construction of rural spiritual civilization. The construction of rural spiritual civilization requires continuous capital investment to improve infrastructure, improve the ecological environment, and improve the level of public services. By providing low-cost, long-term and stable financial support, green finance effectively alleviates the financial bottleneck problem in the process of rural development, and lays a solid material foundation for the smooth progress of rural spiritual civilization construction. In terms of mechanism, green finance and rural spiritual civilization construction promote each other and develop in coordination. On the one hand, through the innovation of financial products and services, green finance provides diversified financing channels and risk management tools for rural areas, reduces the financing costs and risks of rural industrial development, and stimulates the enthusiasm and creativity of rural residents to participate in the construction of spiritual civilization. On the other hand, the in-depth advancement of rural spiritual civilization construction has improved rural residents' environmental protection awareness and ecological civilization literacy, enhanced their understanding and recognition of the concept of green finance, and created a good social atmosphere and mass base for the promotion and application of green finance in rural areas.

3 Logical Analysis of Green Finance Promoting the Construction of Rural Spiritual Civilization in Hubei Province

3.1 Concept agreement: the common goal of green finance and rural spiritual civilization construction

The deep conceptual agreement between green finance and rural spiritual civilization construction is mainly reflected in their common pursuit of the grand goal of sustainable

development and ecological civilization construction. As an innovative financial model, the core concept of green finance is to deeply integrate the concepts of environmental protection and sustainable development into financial decision-making and services, and to guide social resources to green, low-carbon and environmentally friendly fields through the power of finance, thereby promoting the green transformation of the economic structure and the continuous improvement of the ecological environment. As an important part of the rural revitalization strategy, the fundamental task of rural spiritual civilization construction is to improve the ideological and moral quality, scientific and cultural literacy and civilization of rural residents, and to strive to build a beautiful countryside where man and nature coexist harmoniously and the economy and society develop in a coordinated way. It can be seen that whether it is green finance or rural spiritual civilization construction, both regard the coordinated development of economy, society and environment as their core goal, and are committed to realizing a long-term sustainable development model.

As a province with abundant natural resources and unique ecological environment, Hubei Province is facing the double challenges of economic growth and environmental protection in its rural areas. Under this background, the concept of green finance and rural spiritual civilization construction provides a feasible path for the sustainable development of rural areas in Hubei Province. By developing green finance, rural areas in Hubei Province can effectively alleviate the contradiction between economic development and environmental protection, promote the transformation of rural economy to a green and low-carbon direction, improve the spiritual civilization level of rural residents, and realize the harmonious coexistence of economy, society and environment.

3.2 Financial guarantee: Green finance provides economic support for the construction of rural spiritual civilization

The construction of rural spiritual civilization is a systematic project, involving infrastructure construction, public service improvement, ecological environment protection, cultural industry development and other aspects, all of which require a lot of capital investment. However, the traditional financial model is often difficult to fully meet the capital demand of spiritual civilization construction in rural areas, especially in rural areas where economic development is relatively lagging behind. The source of funds is limited and the financing is difficult, which has become a major bottleneck restricting the construction of spiritual civilization in rural areas.

The emergence of green finance provides new ideas and solutions to solve this problem. Through innovative financial products and service models, such as green credit, green bonds, green funds, etc., green finance provides diversified financing channels for rural areas, effectively alleviating the financial bottleneck problem in the construction of rural spiritual civilization. These green financial products and services not only broaden the sources of funds in rural areas, but also reduce financing costs, improve financing efficiency, and provide stable and sustainable financial guarantee for the construction of rural spiritual civilization.

Green finance can provide economic support for the construction of rural spiritual civilization in the following ways: First, it directly invests in rural infrastructure construction and public service improvement projects, such as the improvement of rural roads, water supply, power supply, communications and other infrastructure, as well as education, Improvement of public services such as medical care and culture; The second is to support rural environmental protection and ecological restoration projects, such as sewage treatment, garbage disposal, afforestation, etc., to improve the rural ecological environment and improve the quality of life of rural residents; The third is to support the development of rural cultural industries, such as rural tourism, rural handicrafts, folk culture, etc.,

so as to drive rural economic growth and increase residents' income through the development of cultural industries, and at the same time provide richer cultural connotations for the construction of rural spiritual civilization.

In rural areas of Hubei, the role of green finance in financial guarantee is particularly prominent. Hubei Province is rich in natural resources and unique ecological environment, and rural areas have great potential to develop green finance. By developing green finance, Hubei Province can attract more social funds to invest in rural areas and support the construction of rural spiritual civilization. At the same time, green finance can also guide the industrial development in rural areas to transform into a more environmentally friendly and efficient direction, promote the green growth of rural economy, and provide a more solid economic foundation for the construction of rural spiritual civilization.

3.3 Industrial guidance: Green finance promotes the development of rural green industries

Green finance is not only a means of financing, but also an innovation of economic development model. It effectively promotes the vigorous development of green industries in rural areas through policy guidance and market mechanism. In this process, green finance not only injects new vitality into the rural economy, but also provides rich connotations and solid material foundation for the construction of rural spiritual civilization.

Green finance gives priority to supporting the development of green industries such as ecological agriculture, clean energy, and rural tourism by accurately matching the resource endowment and development needs of rural areas. In the field of ecological agriculture, green finance encourages farmers to adopt environmentally friendly and sustainable agricultural production methods, reduce the use of chemical fertilizers and pesticides, and promote organic agriculture and circular agriculture, which not only improves the quality and safety of agricultural products, but also protects the rural ecological environment and promotes the harmonious coexistence between agriculture and nature. In terms of clean energy, green finance helps rural areas develop and utilize renewable energy such as solar energy and wind energy, which not only reduces rural energy costs and carbon emissions, but also provides new growth points for the rural economy. Relying on the unique natural scenery and cultural landscape of the countryside, the rural tourism industry has been optimized and upgraded with the support of green finance, and a number of green tourism projects integrating sightseeing, leisure, vacation and experience have been created, attracting a large number of tourists and driving the diversified development of rural economy. The rise of these green industries has not only brought considerable economic benefits to the rural economy, but also injected new elements and vitality into the construction of rural spiritual civilization. The development of green industry has prompted rural residents to pay more attention to the protection of ecological environment, forming a green, low-carbon and environmentally friendly lifestyle; At the same time, green industry also provides more employment opportunities and entrepreneurial platforms for rural residents, improves their income level and quality of life, and enhances their sense of happiness and gain.

In rural areas of Hubei Province, green finance plays a particularly significant role in guiding the industry. The Hubei provincial government actively responded to the national call and introduced a series of policies and measures to encourage the application and promotion of green finance in rural areas. By setting up green industry funds, providing green credit concessions, and promoting green insurance products, Hubei Province has provided all-round support and guarantee for the development of rural green industries. These measures not only stimulate the development potential of green industries in rural areas, but also provide strong support for the construction of

rural spiritual civilization, and promote the overall revitalization and sustainable development of rural areas in Hubei Province.

3.4 Social effects: Green finance and rural spiritual civilization construction promote each other, forming a virtuous circle

The deep integration of green finance and rural spiritual civilization construction not only injects new vitality into rural areas at the economic level, but also has a far-reaching positive impact at the social level, forming a virtuous circle of mutual promotion and coordinated development between the two. The establishment of this circular mechanism indicates that Hubei Province has found an effective path to take into account the double promotion of economic development and environmental protection, material civilization and spiritual civilization in the process of promoting the rural revitalization strategy.

Through its unique resource allocation function, green finance guides social capital to tilt towards rural green industries, which not only promotes the green transformation and sustainable development of rural economy, but also provides a solid economic foundation for the construction of rural spiritual civilization. With the vigorous development of green industry, the economic vitality of rural areas has been released, the income level of residents has increased, and the quality of life has improved, which provides necessary material guarantee for the construction of rural spiritual civilization. At the same time, the development of green industry has also promoted the improvement of rural ecological environment, made rural areas a beautiful home suitable for living and working, further stimulated residents' yearning and pursuit for a better life, and created a good social atmosphere for rural spiritual civilization construction.

On the other hand, the continuous deepening of rural spiritual civilization construction has also created more favorable social conditions for the promotion and application of green finance in rural areas. With the improvement of rural residents' ideological and moral quality, scientific and cultural literacy and civilization, their knowledge and understanding of green finance concepts have gradually deepened, and they are more willing to accept and support green financial products and services. This positive social attitude has laid a solid mass foundation for the popularization and promotion of green finance in rural areas. At the same time, the values of integrity, harmony, and symbiosis emphasized in the construction of rural spiritual civilization also provide beneficial social credit support for the risk management of green finance and reduce the operating cost and risk level of green finance business.

This benign interaction between the two not only promotes the overall revitalization and sustainable development of rural areas in Hubei Province, but also provides experiences and models for other areas to learn from.

4 Exploration on the path of green finance promoting the construction of rural spiritual civilization in Hubei Province

4.1 Path planning: the integration path of green finance and rural spiritual civilization construction

When exploring the path of green finance to promote the construction of rural spiritual civilization in Hubei Province, we must first clarify the integration point of green finance and rural spiritual civilization construction. Including the role of green finance in promoting rural economic development, ecological environment protection, social and cultural prosperity, and improving the governance system, and how these roles are consistent with the goal of rural spiritual civilization

construction. Based on these integration points, we can plan a path of integrating green finance with rural spiritual civilization construction, that is, through the development of green finance, we can promote the green transformation of rural economy, enhance rural residents' environmental awareness and civilized literacy, and then promote the comprehensive deepening of rural spiritual civilization construction.

4.2 Implementation strategy: path choice for coordinated promotion of policy, market and society

When implementing the path of green finance to promote the construction of rural spiritual civilization in Hubei Province, it is necessary to adopt the strategy of coordinated promotion of policies, markets and society. At the policy level, the government should introduce a series of policies and measures to encourage the development of green finance, such as providing financial subsidies, tax incentives, etc., to guide social capital to invest in rural green industries. The government should also strengthen guidance and support for rural spiritual civilization construction, and provide policy guarantee for the integration of green finance and rural spiritual civilization construction. At the market level, we should give full play to the role of market mechanism, meet the diversified financial needs of rural areas and promote the green development of rural economy through the innovation of green financial products and the optimization of service models. At the social level, we should actively mobilize the enthusiasm of rural residents and all sectors of society to participate, and form a coordinated promotion pattern of government guidance, market leadership and social participation.

4.3 Path innovation: a co-construction model of green finance and rural spiritual civilization based on the actual situation in Hubei Province

When exploring the path of green finance to promote the construction of rural spiritual civilization in Hubei Province, we should pay attention to the innovation of the path. Based on the actual situation in Hubei, we can try to build a model of co-construction of green finance and rural spiritual civilization. This model should take green finance as the core and aim at the construction of rural spiritual civilization. Through the development of green finance, it will drive the green transformation of rural economy and the improvement of ecological environment, thus promoting the improvement of rural residents' civilized literacy and the harmony and stability of rural society. Specifically, financial support can be provided for the development of rural green industries by setting up green industry funds, promoting green credit products, and developing green insurance business; At the same time, we can also enhance rural residents' environmental awareness and civilized literacy by carrying out environmental education and promoting green lifestyle activities; Finally, through the deep integration and coordinated development of green finance and rural spiritual civilization construction, the comprehensive revitalization and sustainable development of rural areas in Hubei Province will be promoted.
