ABSTRACT

The theoretical perspective of economics reveals that aesthetic education has a remarkable effect on the promotion of individual aesthetic appreciation and innovative thinking ability, which is not only of great benefit to the overall improvement of personal quality, but also plays an indispensable role in promoting the overall prosperity and continuous progress of social economy and culture. Next, this paper will carefully analyze the positive role of aesthetic education in improving the equality of opportunities in education, and explain the deep logic and principle behind the promotion of educational equity from the perspective of economics.

KEYWORDS

aesthetic education; educational equity; economic analysis

The economic analysis of aesthetic education in promoting the fairness of education not only focuses on the balance of educational resource allocation, but also emphasizes the cultivation of students' inner feelings and aesthetic appreciation through art, music, dance and other beautiful forms, so as to promote the comprehensive and fair development of education in a deep level. From the perspective of economics, the investment of aesthetic education is not a simple cost expenditure, but a long-term investment in human capital. This investment is not only reflected in the improvement of students' artistic skills, but also in the shaping and promotion of students' comprehensive quality. Aesthetic education can cultivate students' creativity, imagination and critical thinking, which are of high economic value in today's rapidly developing society.

1 The economic theory basis of aesthetic education

As an essential part of China's education system, aesthetic education has a profound and diversified theoretical foundation, and involves quite rich economic principles. From the perspective of supply and demand, aesthetic education, as a unique form of education, its market demand is closely related to the development of society and people's yearning for a better life. With the continuous progress of society, people's demand for aesthetic education is also growing continuously. On the supply side, with the continuous optimization and rational allocation of educational resources in China, the supply capacity of aesthetic education is also gradually improving. This change of supply and demand relationship undoubtedly provides a broad space and opportunity for the development of aesthetic education.

The supply and demand relationship of aesthetic education in the market is not completely determined by the market, but more complex economic principles are hidden behind it. For

example, the theory of public goods provides a new perspective for understanding the economic value of aesthetic education. According to the theory of public goods, aesthetic education, as a public product, is non-exclusive and non-competitive, which means that everyone can enjoy the results of aesthetic education without distinction, and will not reduce the consumption opportunities of others because of one person's consumption. This characteristic makes aesthetic education play a unique role in promoting social equity and improving national quality. The human capital theory also provides a strong support for the economic value of aesthetic education. Aesthetic education can not only cultivate students' aesthetic ability, creativity and imagination, but also improve their cultural accomplishment and comprehensive quality, and lay a solid foundation for their future development. This investment in human capital can not only improve the social competitiveness of individuals, but also promote the overall progress and development of the society. The status and role of aesthetic education in China's education system cannot be ignored, which is of great significance for cultivating the comprehensive quality and innovation ability of the future generation in China. It is necessary to pay more attention to the development of aesthetic education, increase the investment and support for aesthetic education, improve the quality and level of aesthetic education, and let more people benefit from aesthetic education, so as to promote the all-round development and prosperity of China's educational cause. At the same time, it is also necessary to deeply study the economic principles of aesthetic education, explore the development law of aesthetic education, and provide strong theoretical support and practical guidance for the development of aesthetic education in China.

2 Economic analysis of the input and output of aesthetic education

The input and output analysis of aesthetic education is an important means to evaluate its economic value. First of all, the investment in aesthetic education mainly includes the investment in educational resources, teachers, teaching facilities and other aspects. While these investments may increase the cost of education in the short term, they are an effective investment in human capital. This investment will be directly reflected in the improvement of students' artistic skills, creativity development, aesthetic ability improvement and other aspects, so as to improve students' comprehensive quality and competitiveness.

2.1 The Angle of the output

The most obvious result of aesthetic education is the significant improvement of students' artistic skills and the leap in their aesthetic appreciation ability. This promotion not only means that students can have a deeper understanding of the connotation and charm of art works, but also can discover and create beauty in daily life, so as to improve their personal quality of life and interest.

Aesthetic education also plays a vital role in cultivating students' creativity and imagination. Through artistic practice and aesthetic experience, students can enjoy their imagination and exercise their creativity in an unconstrained space, which is of great significance for them to put forward innovative ideas and solve problems in various fields in the future. At the same time, aesthetic education can also stimulate the potential of students, so that they can face various challenges and opportunities in the face of more leisurely and leisurely in the future, thus greatly expanding their future development space. Through aesthetic education, students can be trained and improved in cultural literacy, critical thinking, teamwork and other aspects. The improvement of these qualities not only helps students to better adapt to the development and change of the society, but also can provide strong support in their career and enhance their advantages in the social competition. The social and long-term benefits of aesthetic education also deserve attention.

Through aesthetic education, students' cultural literacy and aesthetic level can be improved, which can not only enrich their spiritual world, but also promote the prosperity and development of social culture. The cultivation of students' creativity and imagination has injected a steady stream of vitality into the innovation and development of the society. These outputs are not only long-term, but also can have a far-reaching impact on the social level, which is of great significance to improve the cultural taste and creativity level of the whole society.

2.2 The perspective of economics

From the perspective of economics discussion and analysis, we can find that there is a close and positive correlation between the investment of aesthetic education and the final income. Although in a short-term perspective, improving the level and quality of aesthetic education may mean that a certain amount of education expenditure must be increased, but with a longer-term perspective, it can be found that such investment will eventually bring rich economic returns and social benefits. Therefore, it is necessary to comprehensively improve the understanding and evaluation of aesthetic education in the sense of economics, take more positive attitudes and measures, and increase the financial support and resource input for aesthetic education, so as to promote aesthetic education to play a greater role in the complete education system and obtain a more comprehensive development. In economics, investing in education, especially aesthetic education, is a long-term investment, which will produce huge economic benefits in the future. Therefore, we should re-examine the importance of aesthetic education from the perspective of economics, and take corresponding measures to improve the level of aesthetic education. It is necessary to pay more attention to aesthetic education in the education system to ensure that aesthetic education has enough resources and support, so that it can play its due role in the education system. At the same time, it is also necessary to change people's understanding of aesthetic education and make it an important part of education, not just an optional part. Only in this way, can we really play the role of aesthetic education, improve the aesthetic literacy and innovation ability of the whole society, and promote the sustainable development of economy.

3 Aesthetic education and the cultivation of innovation ability

There is an inseparable relationship between aesthetic education and the cultivation of innovation ability. In the rapidly developing modern society, innovation ability has become an important driving force for individual and social development. Aesthetic education provides a solid foundation for students to cultivate their innovative ability by cultivating their aesthetic ability and creativity.

3.1 Break the traditional thinking mode

Aesthetic education actively advocates students to get rid of the old thinking framework, and to examine the world and think about problems from the artistic perspective full of personality and creativity. This practice of breaking the convention can not only arouse students' innovative consciousness and spirit of exploration, but also enable them to put forward unique ideas and solutions when faced with complex problems. In addition, aesthetic education also helps to expand students' knowledge vision, so that they have the opportunity to contact and understand the essence of different cultures and art forms, and then enrich their thinking dimensions and improve their ability to solve practical problems. According to the education of aesthetic education, breaking the traditional thinking mode is the key to cultivate students' innovative ability. By guiding students

to observe and think from the perspective of art, they can gradually form their own unique perspective and insights, which is crucial to cultivating the spirit of innovation. At the same time, this way of education also helps to cultivate students' courage to face challenges, so that they can keep calm and confident in the face of complex and uncertain problems, and have the courage to try new methods and seek breakthroughs. Aesthetic education also emphasizes on broadening students' cultural vision. Through exposure to different art forms and cultural backgrounds, students can better understand and respect diversity and learn to communicate and cooperate in a multicultural environment. This cross-cultural literacy will not only help to improve students' aesthetic ability, but also enhance their interpersonal skills and teamwork skills, making them better in their future study and work.

By guiding students to jump out of the traditional thinking mode, observe the world and think about problems from a unique artistic perspective, aesthetic education aims to cultivate students' innovative spirit and cross-cultural literacy, and improve their ability to solve complex problems. This way of education helps students to form independent thinking and aesthetic ability, so that them become more competitive and adaptable talents.

3.2 Cultivate the ability of interdisciplinary innovation

When discussing the importance of aesthetic education, we find that students must cross the boundaries of traditional subjects and integrate the knowledge of mathematics, physics, chemistry, history, literature and other fields, so as to deeply understand and explain the multi-dimensional connotation of art works. This way of learning across disciplines not only broadens students' horizons, but also exercises their thinking ability, so that they can observe and understand the world from multiple perspectives. Aesthetic education advocates a comprehensive learning mode, which encourages students to think and analyze the knowledge of different disciplines in the process of appreciating and creating art. Such a learning style helps to stimulate students' innovative spirit and cultivate their creative ability. In the future study and work, they will be able to flexibly use the knowledge and skills they have learned to come up with unique views and innovative solutions. Aesthetic education not only enriches the students' knowledge system, but also improves their comprehensive quality. Through the contact and understanding of art, they learn their aesthetic appreciation, cultivate their emotion, and enhance their humanistic quality. The improvement of these qualities makes them more competitive and creative in their future career, and they can better adapt to the development and change of the society.

3.3 Stimulate the creative potential

Aesthetic education is not limited to the simple teaching of painting, music, dance and other art forms in the classroom, but also to guide students into the hall of art at a deeper level, to feel the charm of art, to practice the creation of art. In this process, students need to continue to explore and try in the ocean of art, and to find and determine the artistic way that can best reflect their unique personality and express their inner world through practice. This kind of continuous attempt and challenge is undoubtedly an excellent exercise for students' tenacity and innovative thinking. In the process of continuous exploration and breakthrough, the students learned how to persevere in the face of difficulties, learned how to maintain the pursuit of excellence and dedication to dreams. Aesthetic education, it is in such a kind of practice and experience, aesthetic education quietly affects the students, shaping their positive, never give up the spirit. Aesthetic education can also provide a stage for students to show their talent and charm, so that they can constantly hone and improve their creativity and expression in their actual creation and performance. This platform, like a

catalyst, can greatly stimulate the students' creative potential and make them realize that they have so rich imagination and creativity.

Aesthetic education plays an irreplaceable role in cultivating students' innovative ability. We should pay more attention to the development of aesthetic education, increase the investment and support for aesthetic education, improve the quality and level of aesthetic education, let more people benefit from aesthetic education, so as to inject a steady stream of vitality into the innovation and development of our country. At the same time, we should also strengthen the publicity and promotion of aesthetic education, so that more people can understand the importance and value of aesthetic education, and jointly promote the comprehensive development and prosperity of aesthetic education in China.

4 The influence of aesthetic education policy on educational equity

Aesthetic education policy plays a pivotal role in promoting educational equity. The formulation and implementation of policies can directly affect the allocation of aesthetic education resources, the equality of educational opportunities and the improvement of education quality, so as to further promote the realization of educational equity.

4.1 Optimize the allocation of educational resources

The formulation and implementation of aesthetic education policy aims to make students from all parts of China, all kinds of schools and different social backgrounds can get the opportunity to receive aesthetic education fairly through the optimal allocation of educational resources. The significance of this policy lies in that it pays attention to the balanced distribution of educational resources, especially for rural areas and poor areas, and the policy especially proposes to increase the investment in aesthetic education. This includes but is not limited to the establishment of more art classrooms, concert halls and other teaching facilities, providing more art equipment and equipment, to create a more superior aesthetic education environment for students in these areas. The policy also emphasizes the need to encourage and support art schools, art groups and other professional institutions to establish close partnerships with primary and secondary schools. This cooperation mode can realize resource sharing and complementary advantages, so as to improve the quality and level of aesthetic education. In this way, students will have more opportunities to contact and learn various art forms, such as music, painting, dance, etc., so as to enrich their spiritual world and cultivate their aesthetic ability and creativity.

4.2 To ensure equal educational opportunities

The aesthetic education policy aims to ensure that every student can receive aesthetic education fairly, no matter where they are, what their economic conditions and cultural background are. In order to achieve this goal, the government has formulated and implemented a series of specific policy measures. These include the promotion of the arts talent system and allowing students with artistic talent and expertise to receive extra points in their academic performance, in order to encourage them to more actively participate in aesthetic education. In addition, arts scholarships were established to provide financial support to students who perform well in the arts to help them better develop their artistic talents. Aesthetic education policies also pay special attention to special groups who need special care, such as disabled students. In order to meet their special needs, the policy requires schools and relevant educational institutions to provide barrier-free aesthetic education facilities and services, such as providing special teaching resources and adjusting

teaching methods, to ensure that these students can also enjoy the happiness and growth brought by aesthetic education. The implementation of these policies is of great significance for breaking the restriction of regional, economic, cultural and other factors on the opportunities of aesthetic education, and promoting the equalization of aesthetic education opportunities. Through these measures, we can help those students who are in a disadvantageous position in aesthetic education, so that they can also have the opportunity to receive high-quality aesthetic education, so as to promote their all-round development.

4.3 Improving the quality of education

Aesthetic education aims to improve students' comprehensive quality and enrich their spiritual world, so it is necessary to build a set of strict educational norms and evaluation system, standardize the teaching content carefully, and ensure that students receive the influence of aesthetic education in a standardized and scientific teaching atmosphere. In this process, the education departments and relevant institutions should pay attention to the standardization of the teaching methods of aesthetic education, and make it more in line with the law of education and students' cognitive characteristics. At the same time, we should also pay attention to the practical link of aesthetic education, so that students can feel the charm of beauty in the actual operation, and cultivate their aesthetic ability and innovative spirit. The policy level also needs to increase the support for the aesthetic education. On the one hand, by encouraging and supporting teachers to carry out innovative attempts and academic research, improve their professional ability and teaching skills. On the other hand, schools and all sectors of society are encouraged to participate in aesthetic education, enrich the supply of educational resources, and provide students with more diversified and personalized aesthetic education services. On this basis, the aesthetic education should also pay attention to the problem of educational equity. By optimizing the allocation of educational resources, we increase the investment in aesthetic education in rural areas and poor areas, to ensure that every child can enjoy high-quality aesthetic education. At the same time, attention should be paid to cultivating students' aesthetic education quality, so that they can feel the power of beauty in a subtle way and provide strong support for their healthy growth.

In the process of promoting educational equity, aesthetic education policies also need to be coordinated with other relevant policies. For example, in combination with the educational poverty alleviation policy, provide the better aesthetic education resources for students in poor areas; combined with the education reform policies, promote the innovation and development of aesthetic education in the curriculum system and teaching methods; combined with the social and cultural policies, create a good social and cultural atmosphere to provide strong support for the development of aesthetic education. Through coordination, the aesthetic education policy can better play its role and promote the realization of educational equity.

5 Epilogue

As an important part of cultivating comprehensive development talents, the importance of aesthetic education cannot be ignored. Under the background of globalization and information technology, aesthetic education plays an irreplaceable role in improving students' comprehensive quality, cultivating innovative spirit and aesthetic ability, and shaping a sound personality. Aesthetic education plays an important role in educational equity. We should fully understand its importance, strengthen the research on its input and output, optimize the allocation of educational resources, ensure the equality of educational opportunities, and improve the quality of education. At the same time, we should also strengthen the integration and mutual promotion with other disciplines,

strengthen international exchanges and cooperation, and jointly promote the development of aesthetic education and the realization of educational equity. Let us work hand in hand to cultivate more outstanding talents with innovative spirit, aesthetic ability and sound personality.
